[Open in Microsoft Word and press F9 to generate the table of contents]

1. Introduction

Print3D Manager (V2.36) is a web application developed by Simone Soldani (SimonMakerForge) to comprehensively manage every aspect of a 3D printing business: materials, spool inventory, printers, print jobs, quotes, fiscal receipts and a client address book.

The application runs directly in the browser with no installation required, storing data locally with support for a JSON session file for backup and cloud synchronisation (Google Drive, Dropbox, iCloud).

Main features

- Fully customisable interface: Dark, Light or fully custom colour theme
- Automatic cost calculation: material, energy, depreciation, labour
- Spool management with weighted average price and stock monitoring
- Multi-model quotes with PDF generation (internal and client versions)
- Integrated fiscal receipt system: issuance, voiding, annual listing
- Client address book integrated with quotes and receipts
- JSON and CSV export/import for backup and spreadsheets
- Multilingual: Italian and English

Navigation

The horizontal navigation bar at the top of the page gives quick access to all sections: Dashboard, Material Inventory, Contacts, 3D Prints, Quotes/Receipts, Settings. The Calc button opens the Quick Cost Calculator from any screen.

> ℹ️ *Data is saved automatically in the browser (localStorage). To avoid data loss across different devices, link a JSON session file in Settings → Export/Import.*

2. Dashboard

The Dashboard is the main screen, accessible by clicking "Dashboard" in the navigation bar. It is divided into two areas: KPIs + Quote Analytics and Warehouse + Spools.

KPIs and Quote Analytics

Figure 1a — Dashboard: KPIs, Quote Analytics with revenue trend and operational statistics

The top row shows five KPI cards updated in real time:

- Materials — total number of materials in the catalogue (with printer count)
- Critical stocks — materials below their minimum threshold
- Inventory value — total monetary value of stock
- Prints in progress — active print jobs (and total prints)
- Spools — total registered spools (with almost-empty count)

The Quote Analytics section shows quote statistics filterable by period (Day, Month, Year, Custom): revenue, profit, internal costs, 12-month trend chart, material distribution, print hours, failures and energy consumed.

Warehouse and Spools

Figure 1b — Dashboard: Warehouse section with donut charts and Spools panel

The Warehouse section shows two interactive donut charts: material count distribution and inventory value, both broken down by type. The Spools section summarises the status of all spools (open, in stock, almost empty, depleted) with the total stock value.

> 💡 *Click "Manage inventory ›" in the Spools section to go directly to the Material Inventory.*

3. Materials

The Materials section is accessible via "Material Inventory" in the top navigation bar. It manages the complete catalogue of filaments and print materials in two views: Cards and Stock.

Cards view

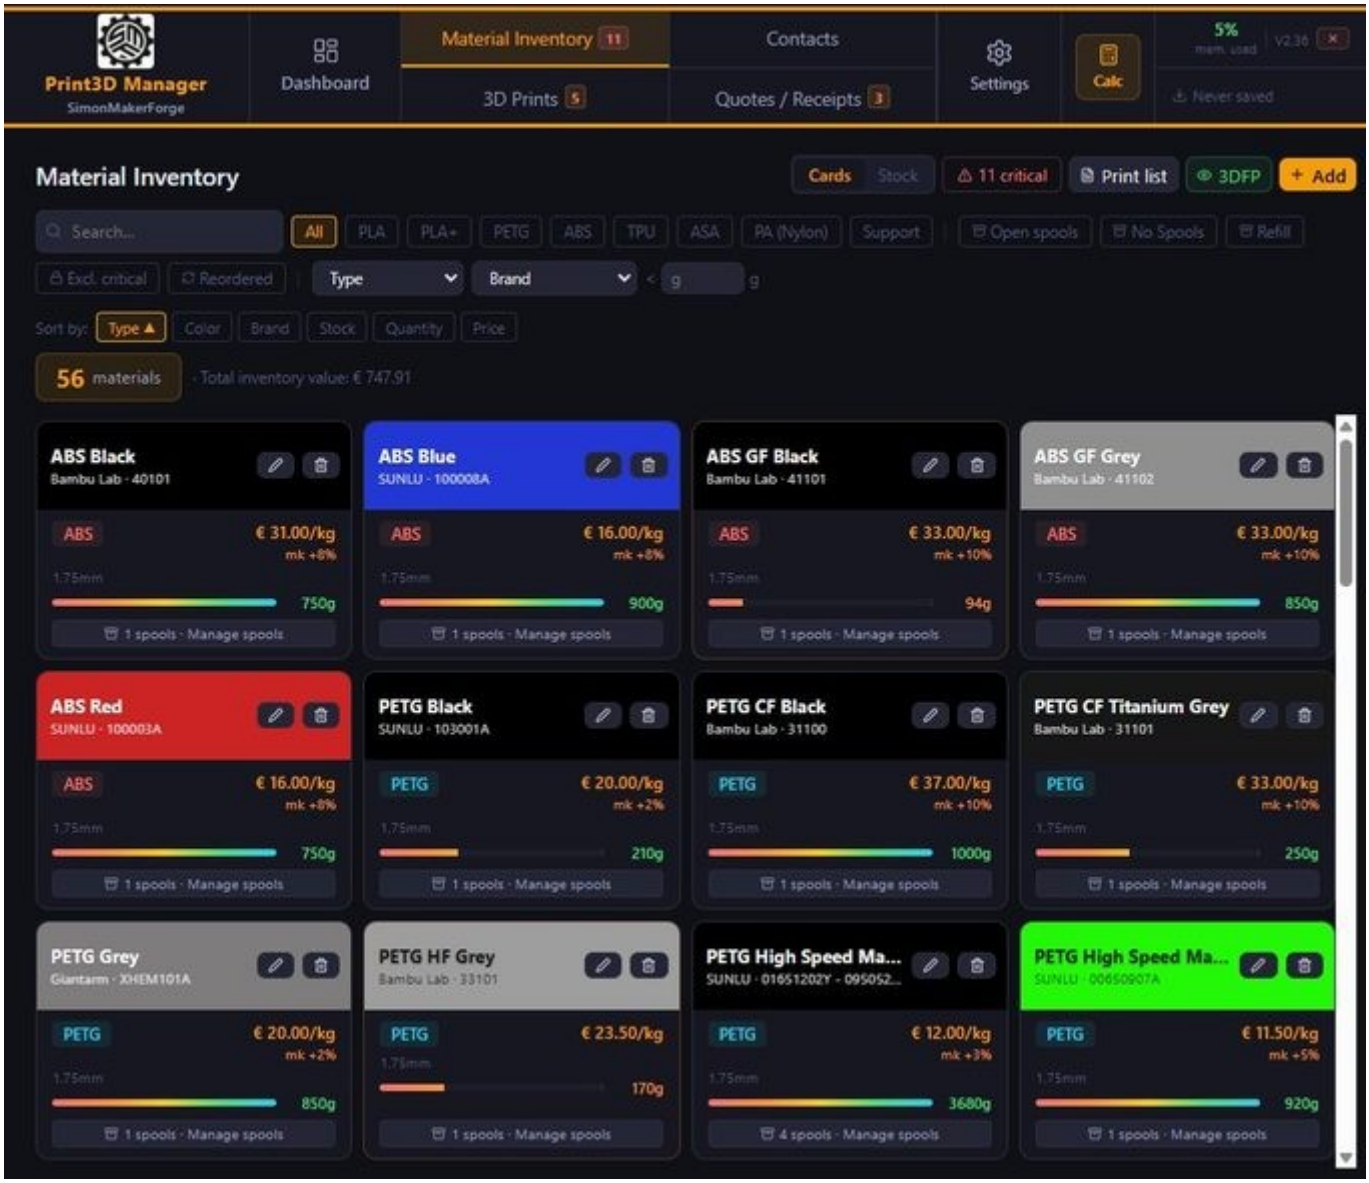

Figure 2a — Material Inventory: Cards view with quick filters, type badges, stock level bars and actions

Each material is shown as a card with: full name, manufacturer code, brand, type (coloured badge), price per kg with markup, stock in grams with a colour-coded level bar, and monetary value of the remaining stock. Quick filters allow filtering by type (PLA, PETG, ABS, TPU, ASA, PA, Support) and spool status (Open spools, No Spools, Refill, Excl. critical, Reordered).

Stock view

Figure 2b — Material Inventory: Stock view grouped by type with stock summary, spools and value

The Stock view shows a summary grouped by material type: number of materials, total stock in kg, open spools and total value. The colour bar indicates the percentage of critical materials within the group.

Adding or editing a material

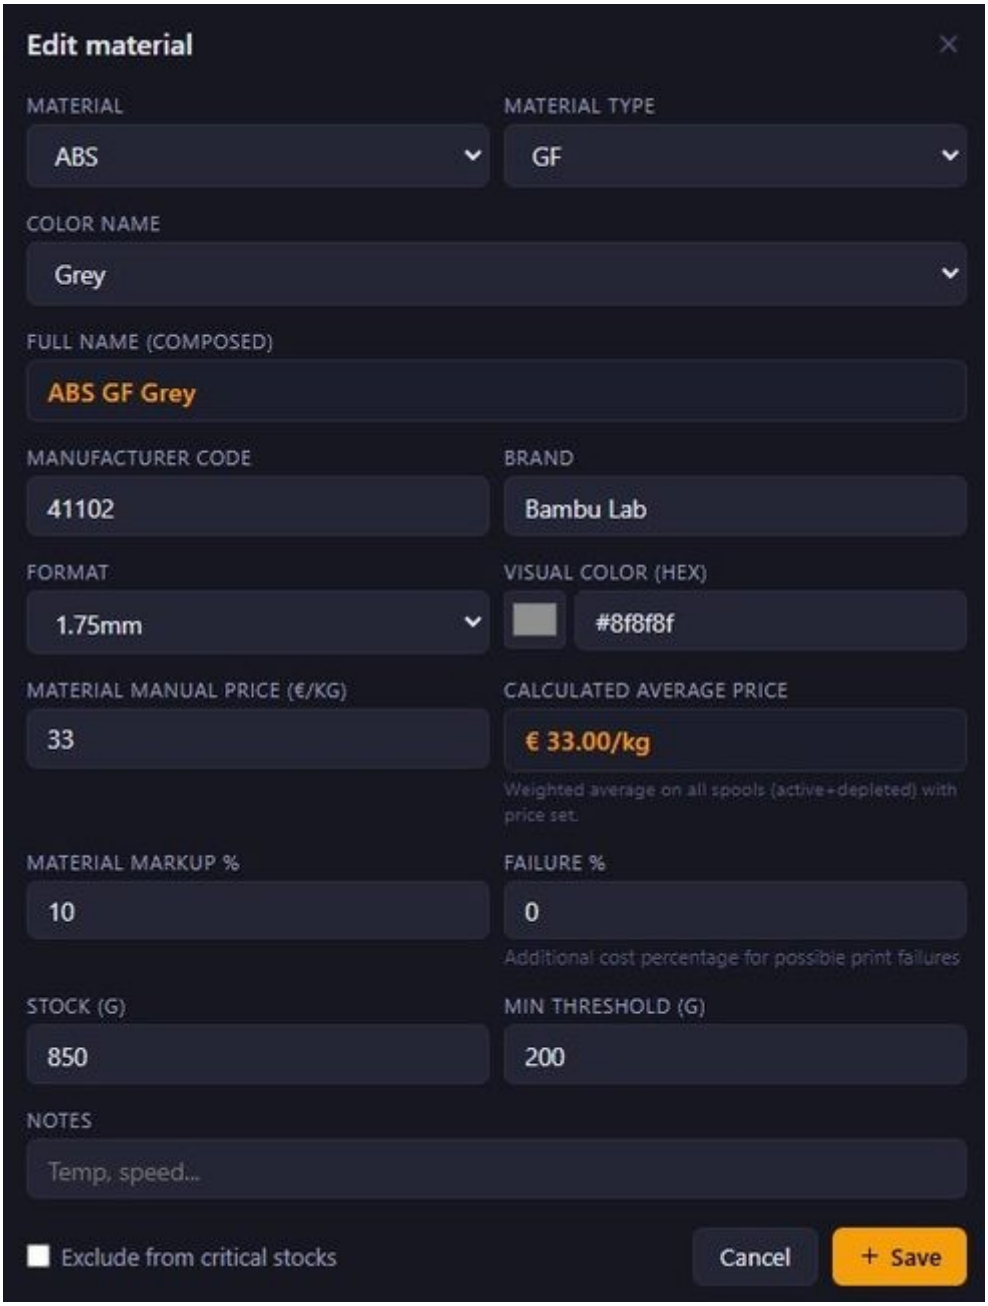

Figure 3a — Edit material form with all fields and automatically calculated weighted average price

Click "+ Add" to create a new material, or the ✏️ icon to edit an existing one. Available fields:

- Material and Material Type — base type and variant (from customisable lists)
- Color Name and Full Name (Composed) — colour name and auto-generated full name
- Manufacturer Code and Brand — product code and manufacturer
- Format — filament diameter (1.75 mm, 2.85 mm)
- Visual Color (hex) — graphical colour preview
- Material Manual Price (€/kg) — manual reference price
- Calculated Average Price — automatic weighted average from spools with a price set
- Material Markup % and Failure % — markup and failure cost percentage
- Stock (g) and Min Threshold (g) — current stock and critical threshold
- Notes — recommended temperature, speed and print settings
- Exclude from critical stocks — excludes the material from stock alerts

> 💡 *The "Calculated Average Price" is the weighted average of all registered spool prices (active + depleted) and is used automatically instead of the manual price when available.*

Spool Management

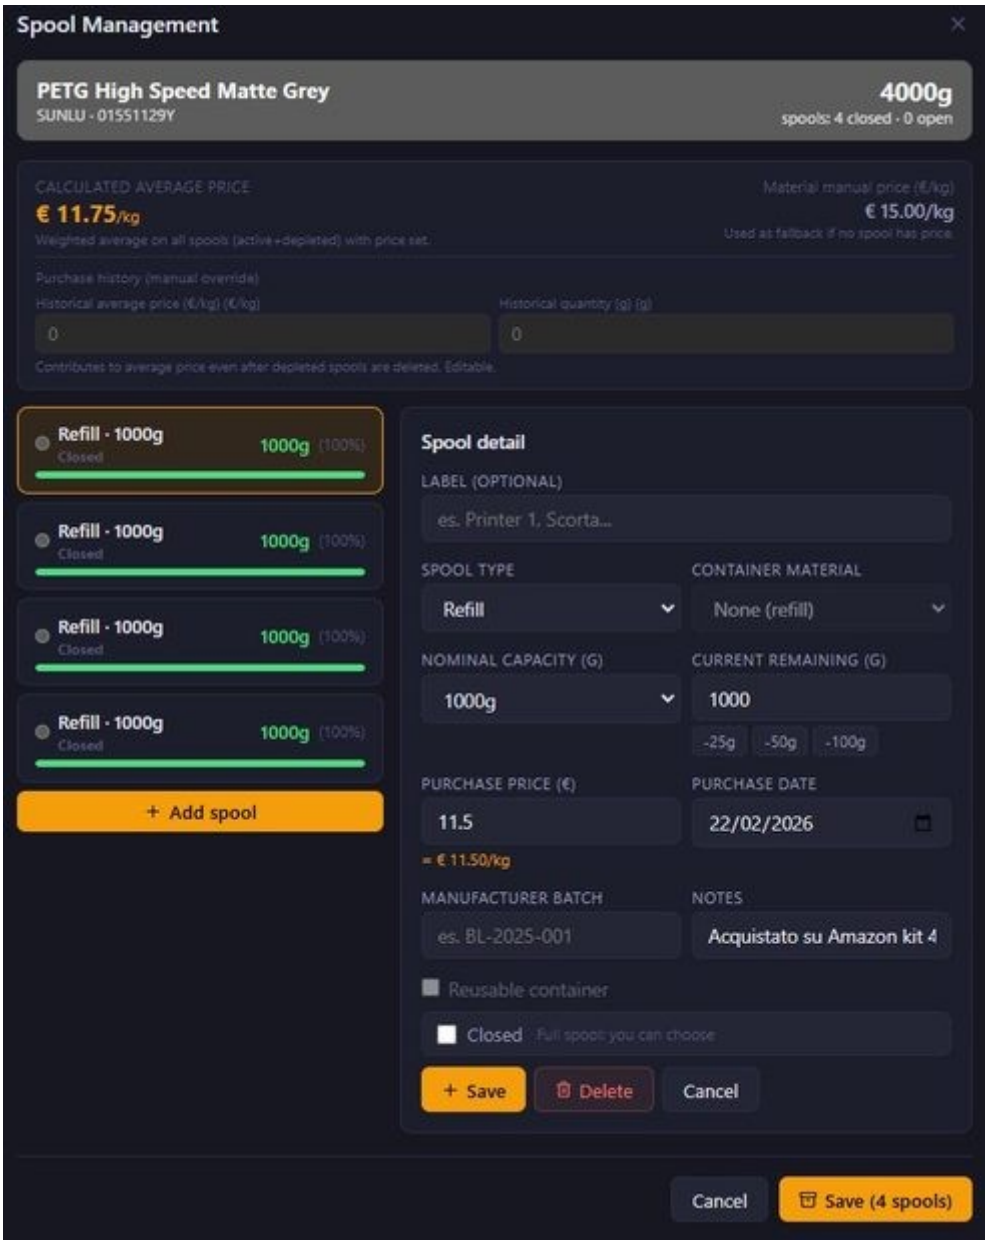

Figure 3b — Spool Management: spool list, calculated average price and individual spool detail

The Spool Management panel opens by clicking "Manage spools". It shows: calculated average price, purchase history, spool list with remaining weight and percentage. For each spool: type (Refill/Spool), nominal capacity, current remaining, purchase price and date, manufacturer batch and notes.

> ℹ️ *"Closed" indicates that the spool is still sealed (not yet opened). An opened spool in use is in "Open" status. "Reusable container" marks the container as reusable and is counted separately on the Dashboard.*

4. Inventory — Navigation and Advanced Filters

The Material Inventory supports breadcrumb navigation that allows filtering materials by type and then by brand, reaching a very specific view.

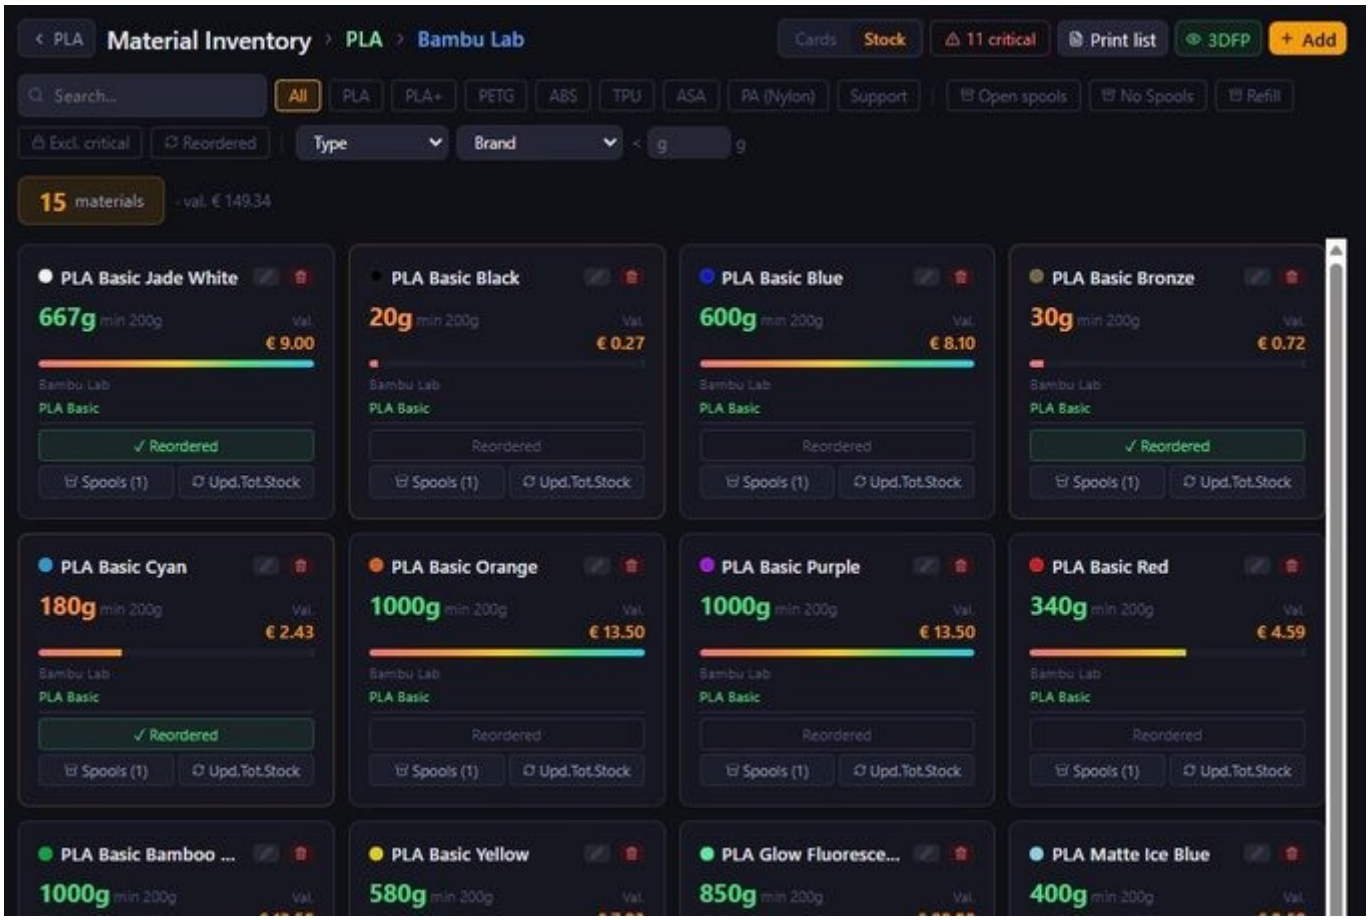

Figure 4 — Filtered Inventory: PLA › Bambu Lab, Stock view with level bars and action buttons

Breadcrumb navigation

In the top bar, click a type (e.g. PLA) to filter. Then click a brand (e.g. Bambu Lab) to see only that subset. The breadcrumb shows the active path and allows navigating back to any level.

Special filters and actions

- Open spools — materials with at least one open spool
- No Spools — materials with no registered spools
- Refill — materials with Refill-type spools
- Excl. critical and Reordered — stock management status
- Spools (N) — opens the spool manager
- Upd.Tot.Stock — manually updates the total stock
- Print list — prints the critical stock list as HTML
- 3DFP — link to the filament on a configured external service

5. Printers

The Printers section is accessible from Settings → Printers. The parameters defined here are used in all cost calculations for prints and quotes.

Figure 5 — Printer Settings: cards with consumption, depreciation and calculated hourly cost

Each printer card shows: brand and model, average consumption (kW), depreciation (€/h) and calculated total hourly cost (consumption × €/kWh + depreciation). Click "+ Add" to add a printer with name, brand, consumption, depreciation and optional notes.

> 💡 *The €/kWh electricity cost is configured globally in Settings → Cost Parameters and is shared by all printers.*

6. 3D Prints

The 3D Prints section is the operational log of all print jobs, grouped by their associated quote.

Print list

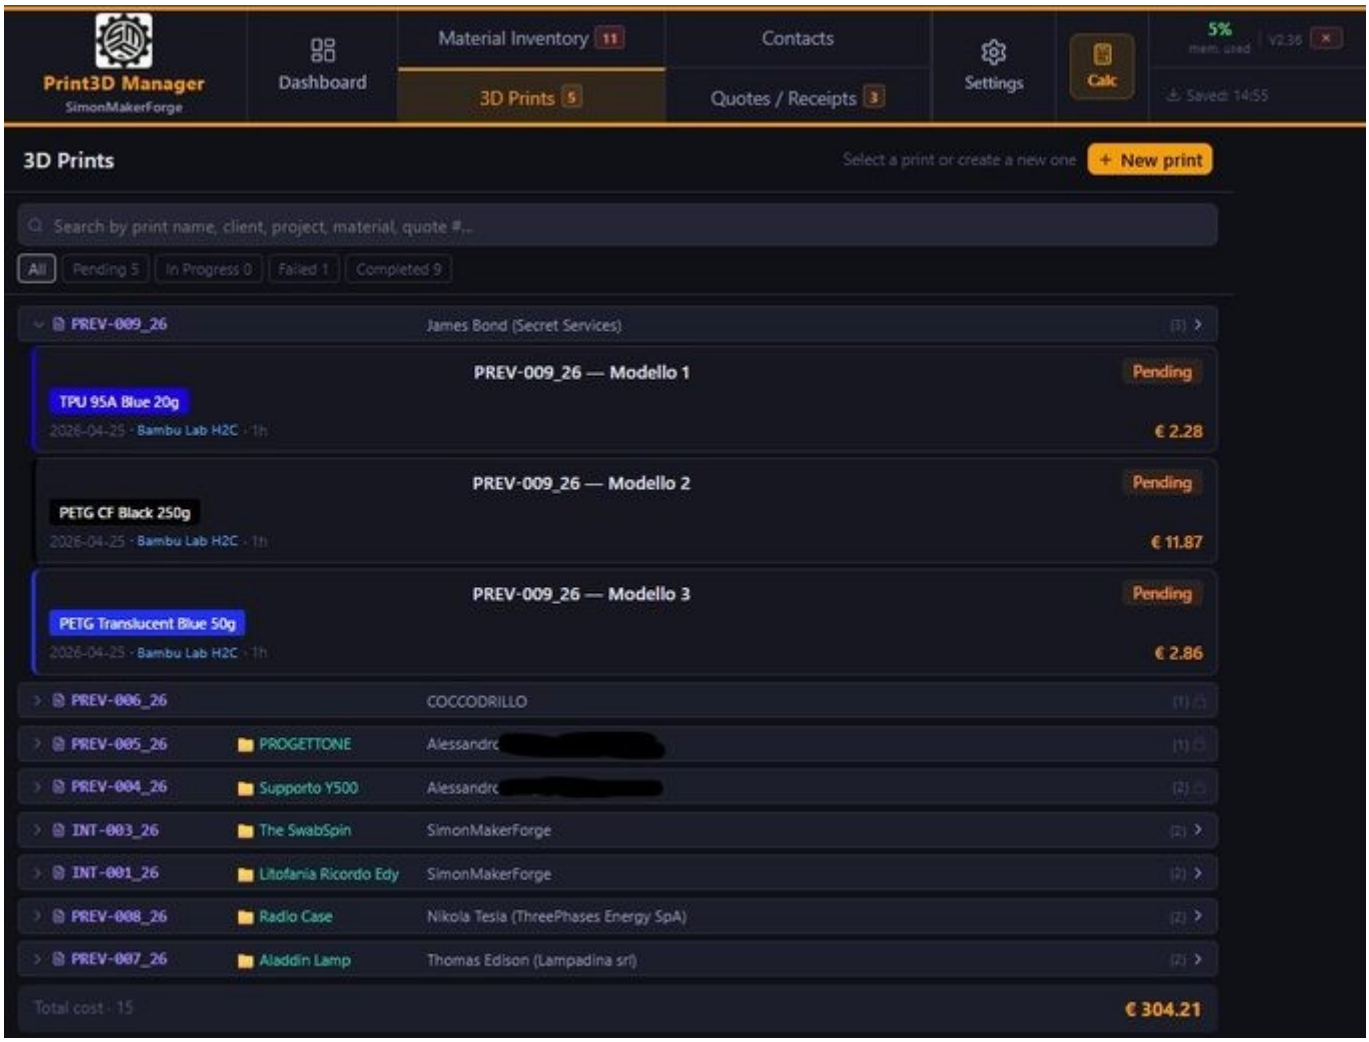

Figure 6a — 3D Prints list grouped by quote, with statuses, materials and costs

The list groups prints by quote number. For each print: model name, materials used (coloured badges), date, printer, duration and production cost. Statuses: Pending (orange), In Progress (blue), Completed (green), Failed (red).

Edit print (side panel)

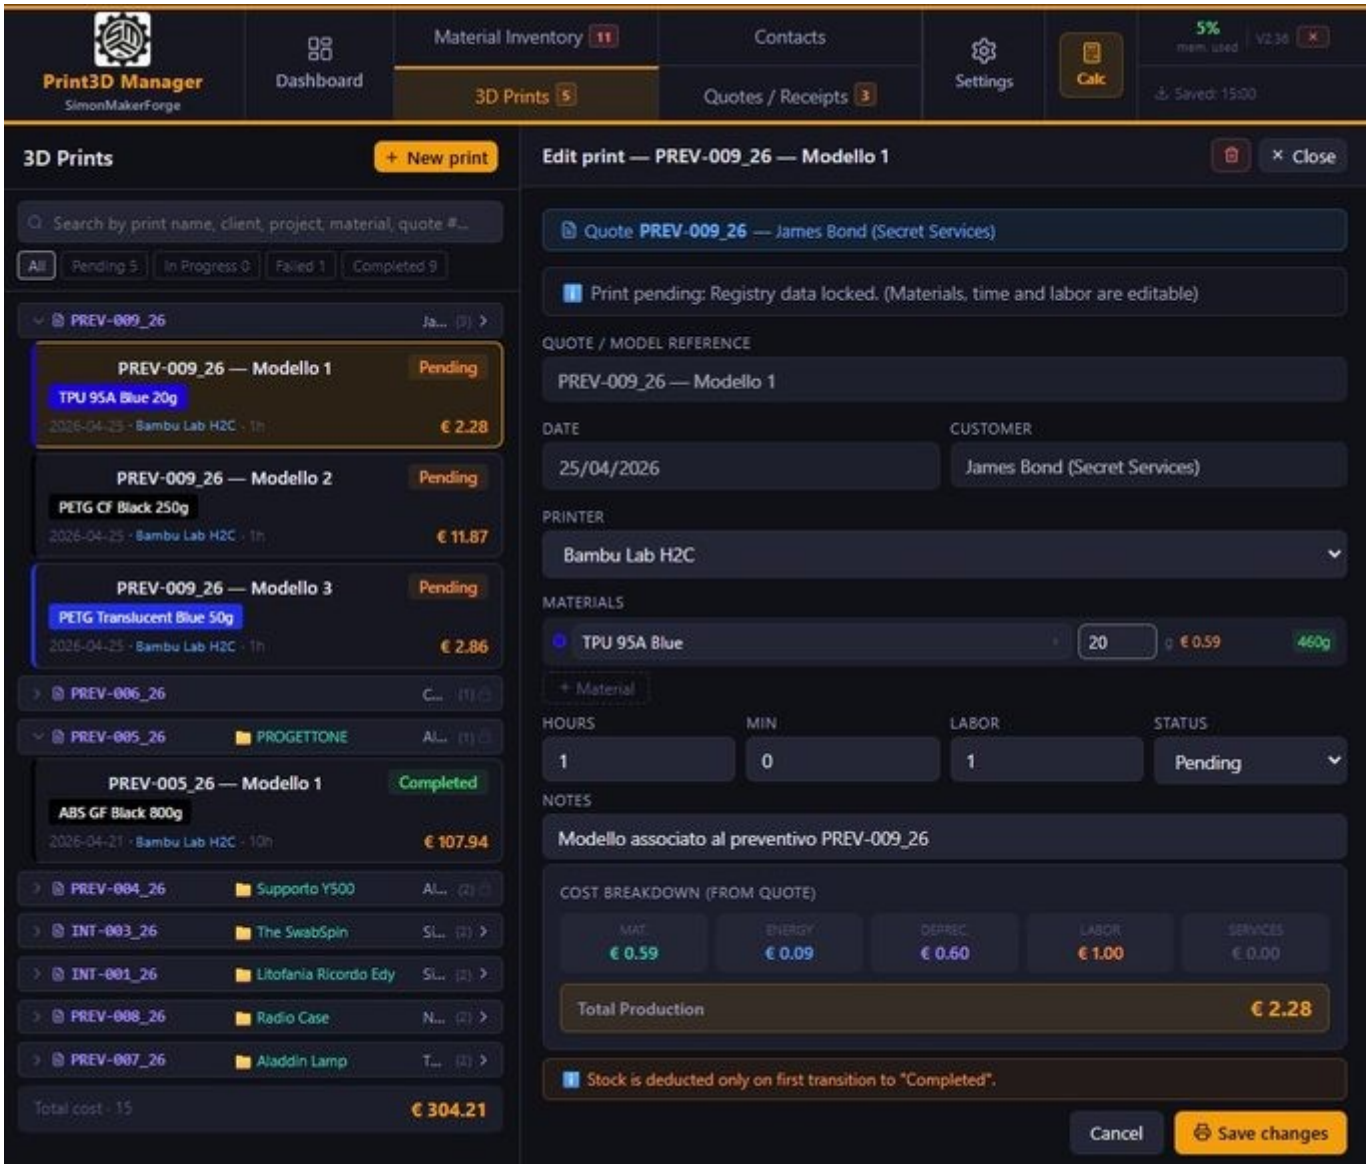

Figure 6b — Edit print panel with quote link and full cost breakdown

Click a print to open the edit panel on the right. It shows: linked quote with direct link, status lock notice if "Pending", printer, materials, duration, labour, status, notes and full cost breakdown (material, energy, depreciation, labour, services).

> ℹ️ *Stock is deducted automatically only on the first transition to "Completed". If a definitive receipt has been issued for the linked quote, the print is read-only.*

7. Quotes / Receipts

The Quotes/Receipts section manages the entire commercial cycle: from creating the quote to issuing the fiscal receipt.

7.1 — Quote list

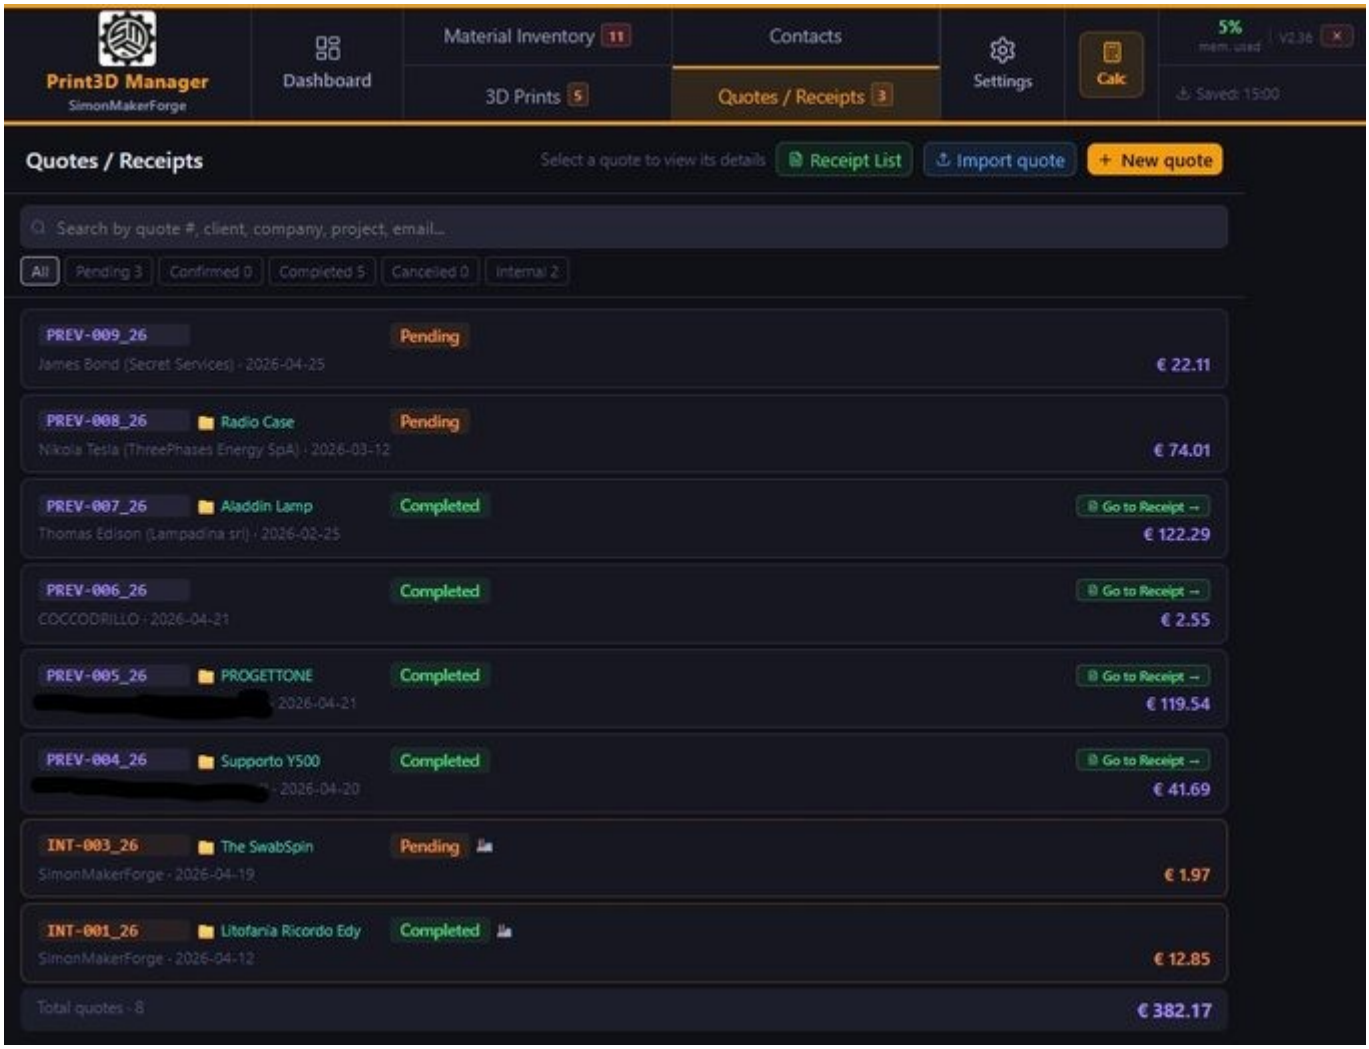

Figure 7a — Quotes/Receipts list with status filters, internal badges and receipt access

The list shows: quote number, project name, client, date, status and total amount. Quotes with an issued receipt show "Go to Receipt →" (green). Internal quotes have a special badge. Filters: All, Pending, Confirmed, Completed, Cancelled, Internal.

7.2 — Quote detail

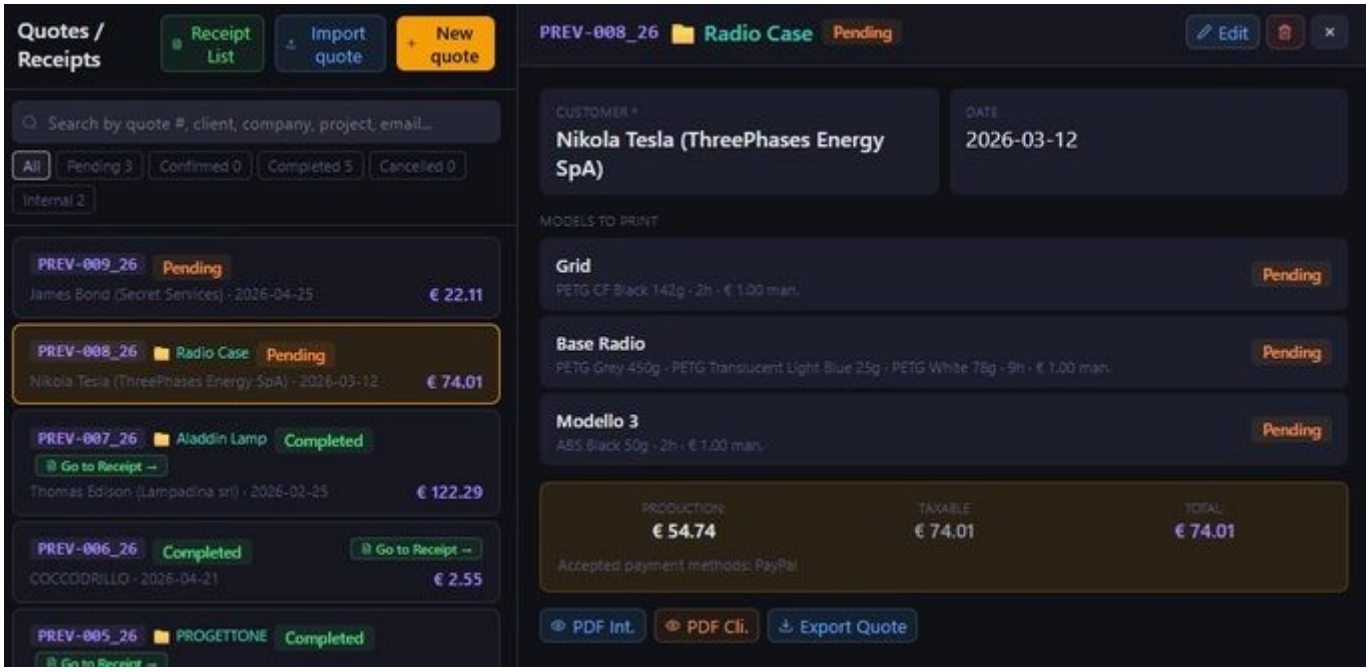

Figure 7b — Quote detail view with side panel: models, costs and PDF actions

Click a quote to open the detail panel: models to print with materials and duration, production cost, taxable amount, total, payment methods and PDF Int., PDF Cli., Export Quote buttons.

7.3 — Creating a new quote

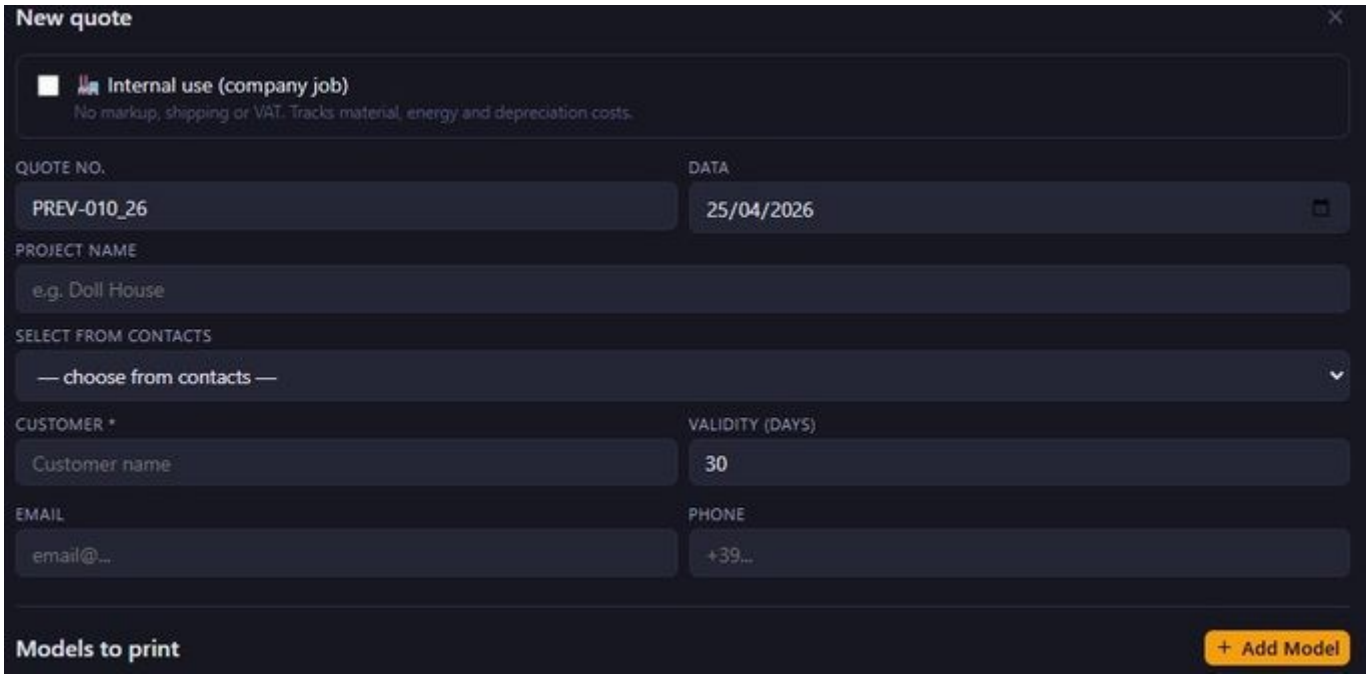

Figure 8a — New quote form: header, internal use option, client data and validity

Click "+ New quote". The first section includes:

- Internal use — if checked, excludes markup, shipping and VAT (tracks company costs only)
- Quote No. — auto-generated, editable
- Project Name — descriptive title for the job
- Select from Contacts — quick selection from the address book

- Customer, Email, Phone — client data (pre-filled from contacts)
- Validity (days) — number of days the quote is valid

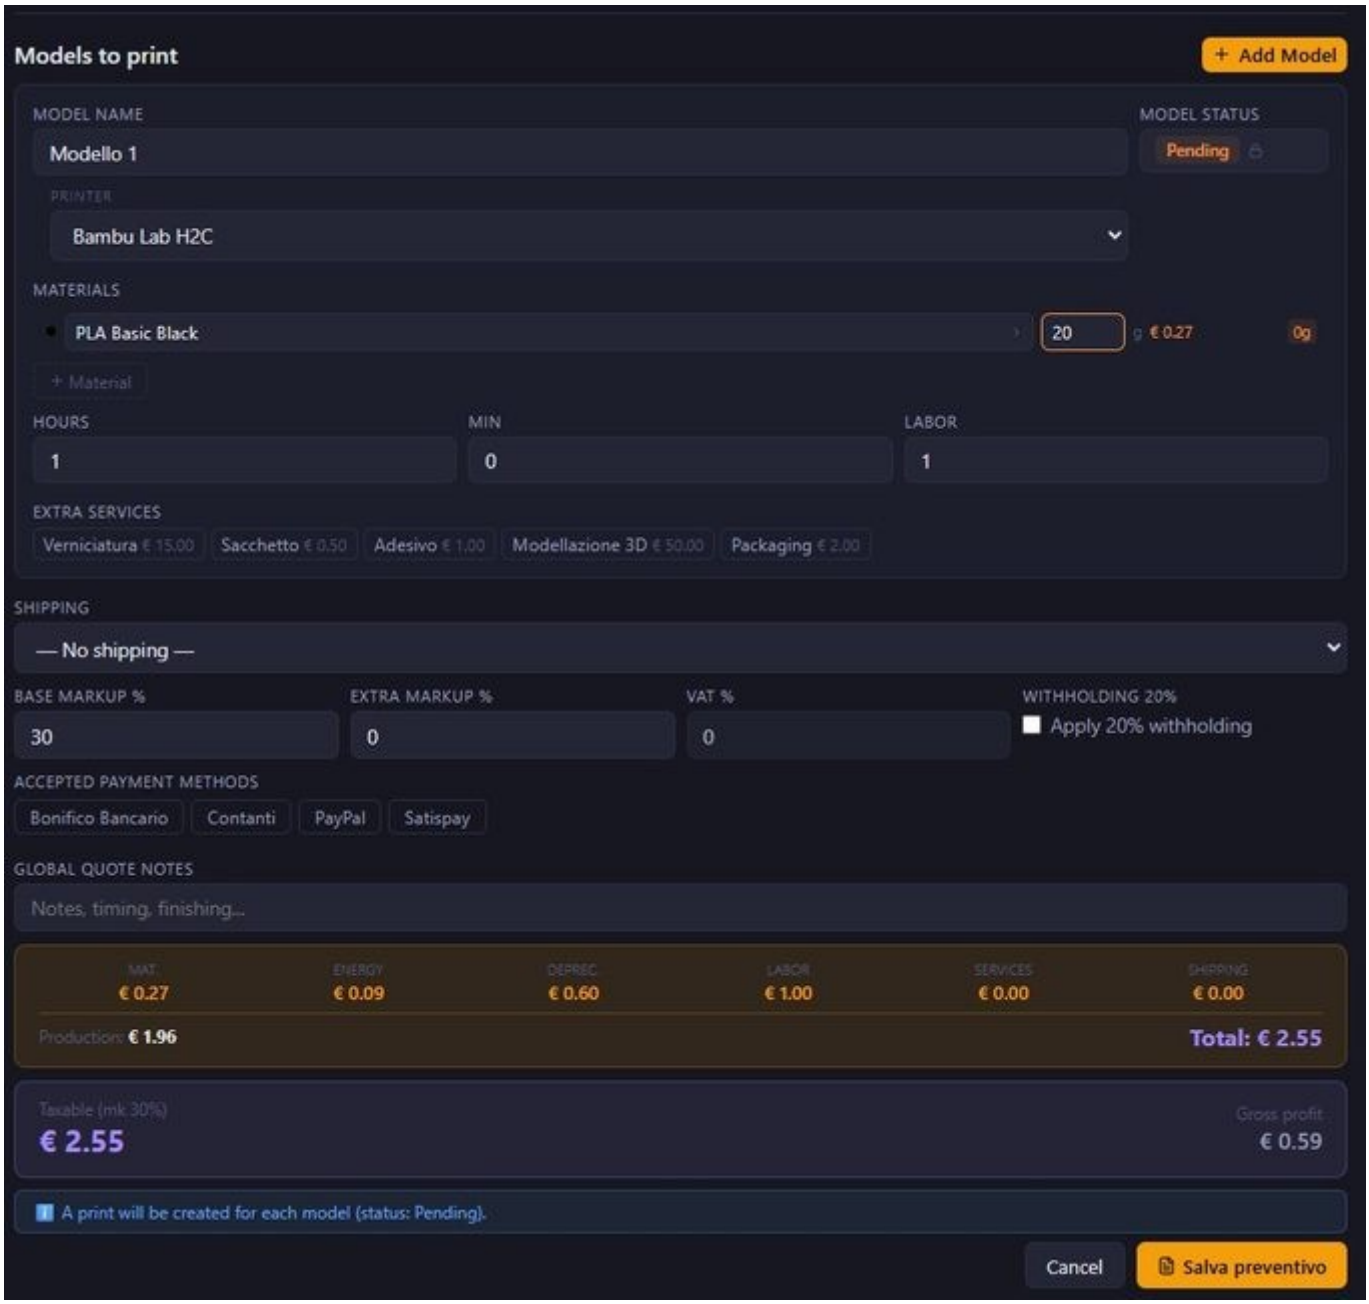

Figure 8b — Quote form: models, services, markup, VAT, payment methods and cost summary

The second part includes:

- Models to print — one or more models with printer, materials, weight, duration, labour and extra services
- Shipping — carrier with shipping cost
- Base Markup % and Extra Markup % — markups on production cost
- VAT % and Withholding 20% — VAT and withholding tax
- Accepted Payment Methods — selectable from those configured in Settings
- Global Quote Notes — notes included in the PDF
- Summary: MAT, ENERGY, DEPREC, LABOR, SERVICES, SHIPPING, Production, Total, Taxable, Gross Profit

> ℹ️ *On save, linked prints are created automatically in "Pending" status — one per model.*

7.4 — Receipts

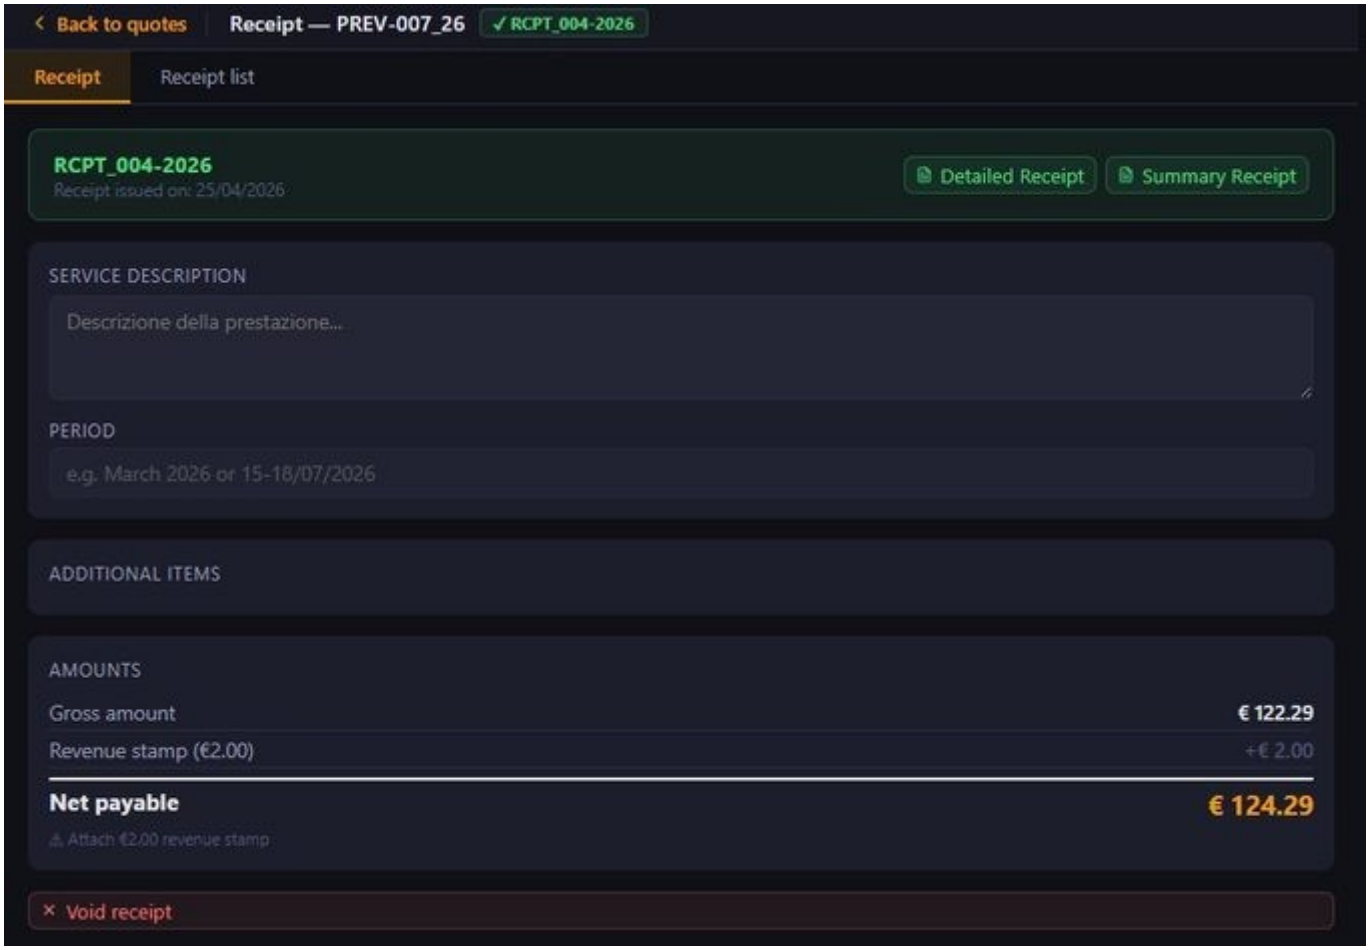

Figure 9 — Issued receipt view with amounts, revenue stamp and PDF buttons

Accessible via "Go to Receipt →" on a completed and paid quote. An issued receipt shows: receipt number (e.g. RCPT_004-2026), issue date, linked quote, service description, period, additional items and amounts (gross amount, revenue stamp, net payable).

Receipt issuance workflow

1. Set the quote status to "Completed"
2. Open the Receipt section of the quote
3. Fill in the service description and period
4. Optionally add extra items and configure withholding tax / revenue stamp
5. Preview the draft PDF (Detailed/Summary Receipt — marked DRAFT)
6. Click "Emit Receipt" to issue definitively — number and date are locked

> 💡 *An issued receipt can be voided via "Void receipt" by entering a mandatory reason. The number is preserved with status VOIDED and a new receipt can be issued with the same number.*

8. Contacts

The Contacts section stores client data, which can be quickly selected when creating quotes.

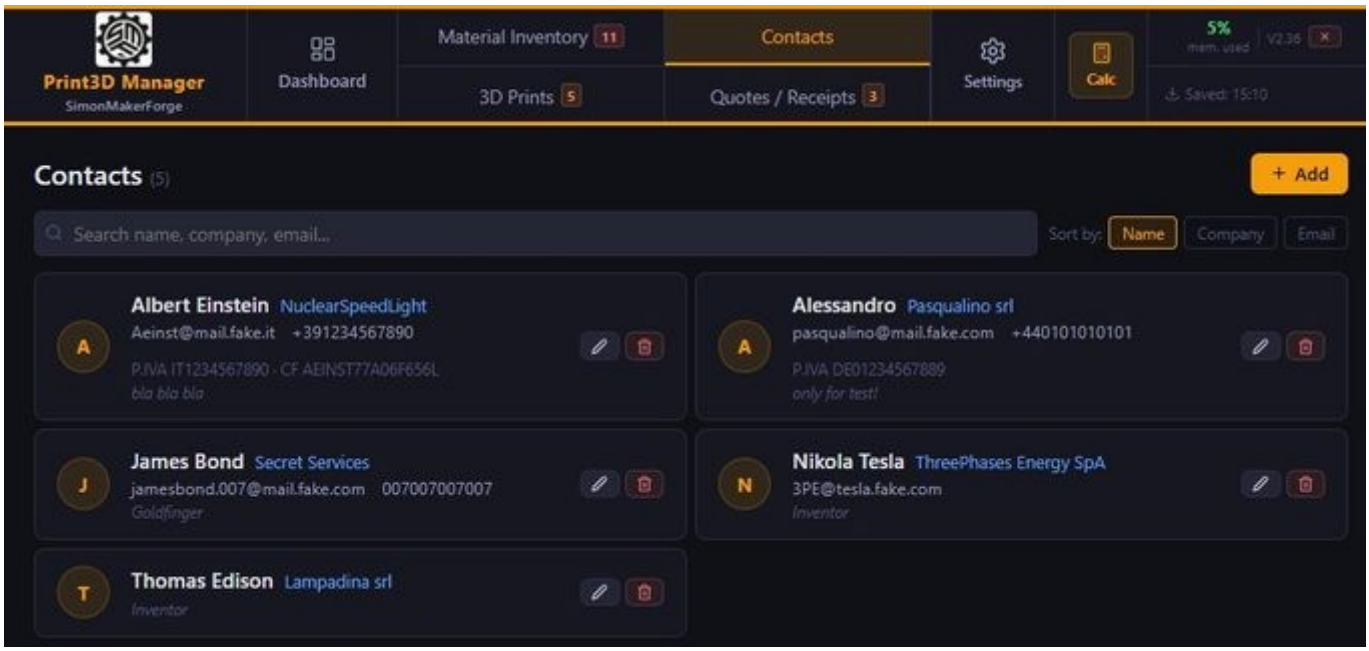

Figure 10 — Contacts with coloured initials avatars, company data and sorting

Each contact shows: coloured initial avatar, name, company, email, phone, VAT number, tax code and notes. The search bar filters by name, company or email. Sorting is available by Name, Company, Email.

- First name, last name and company
- Phone and email
- Full address (street, city, province, postcode)
- VAT number and tax code
- Free-form notes

> 💡 *The company name is shown in brackets next to the client name in quotes and receipts for quick identification.*

9. Settings

Settings collects all application configuration in eleven sub-sections, accessible via the Settings button in the top navigation bar.

9.1 — Company Data

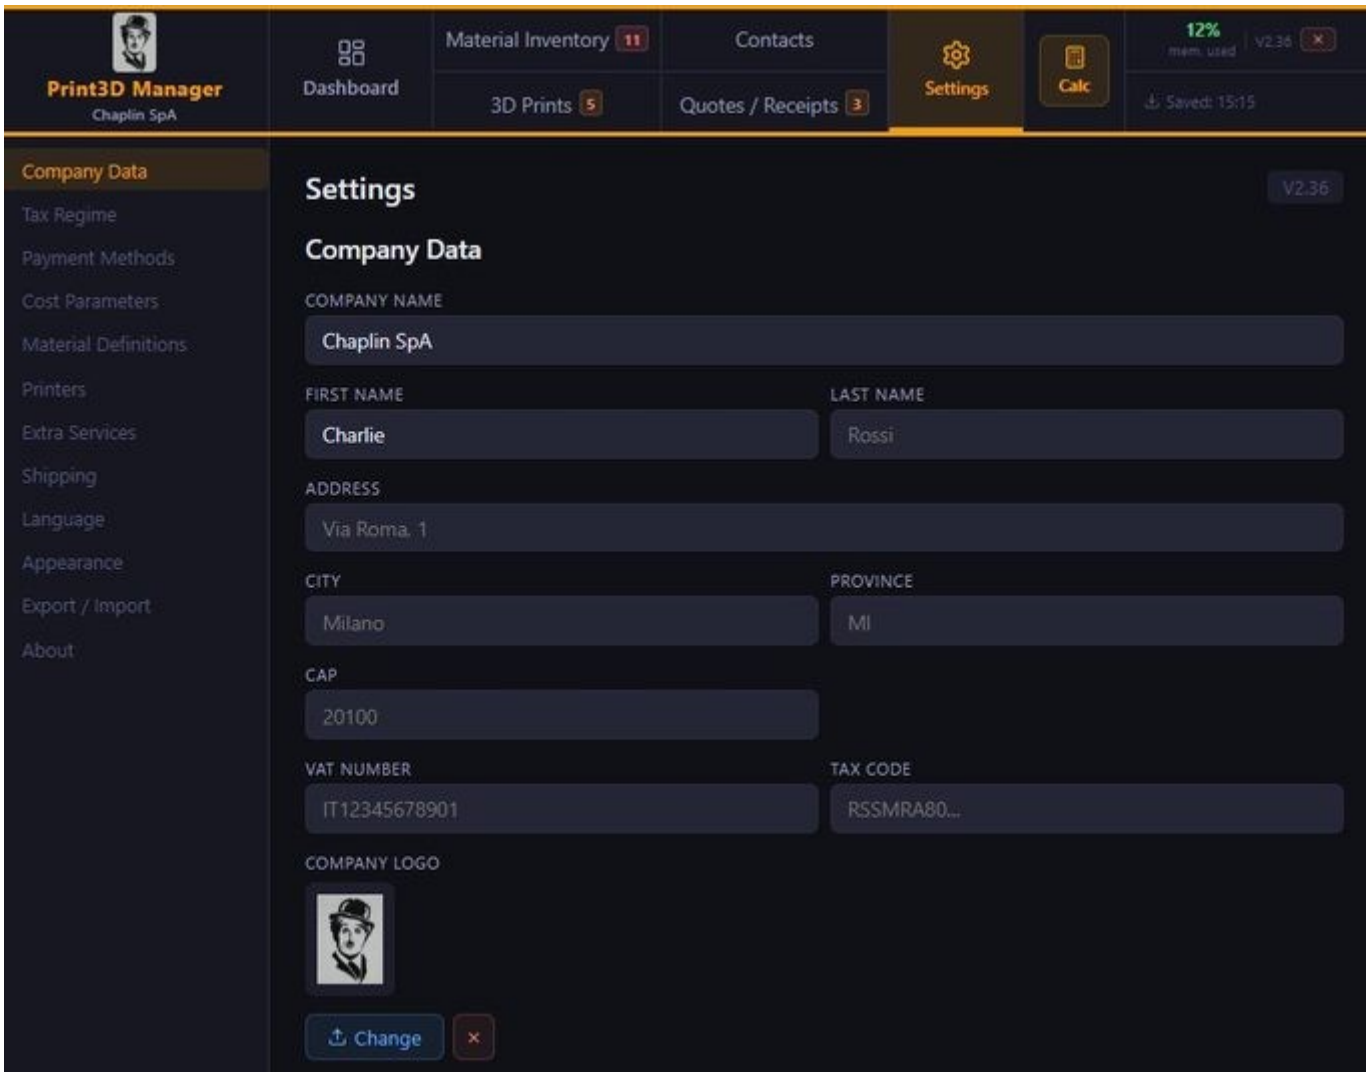

Figure 11 — Company Data settings with business details, VAT number and logo

Enter: company name, first and last name, address, city, province, postcode, VAT number, tax code and logo. These details appear in PDF quotes and receipts. "Change" uploads a new logo; the red X removes it.

Other available sub-sections:

- Tax Regime — Standard, Flat-rate or Occasional service (with 20% withholding tax)
- Payment Methods — accepted payment methods with instructions, selectable in quotes
- Cost Parameters — energy cost €/kWh, default labour rate, global markup, currency, cost formula
- Material Definitions — base lists for the material form and inventory quick filters
- Printers — printer management (see chapter 5)
- Extra Services — extra services selectable in quotes
- Shipping — carriers with name, service type and cost
- Language — Italian / English (immediate change)

9.2 — Appearance

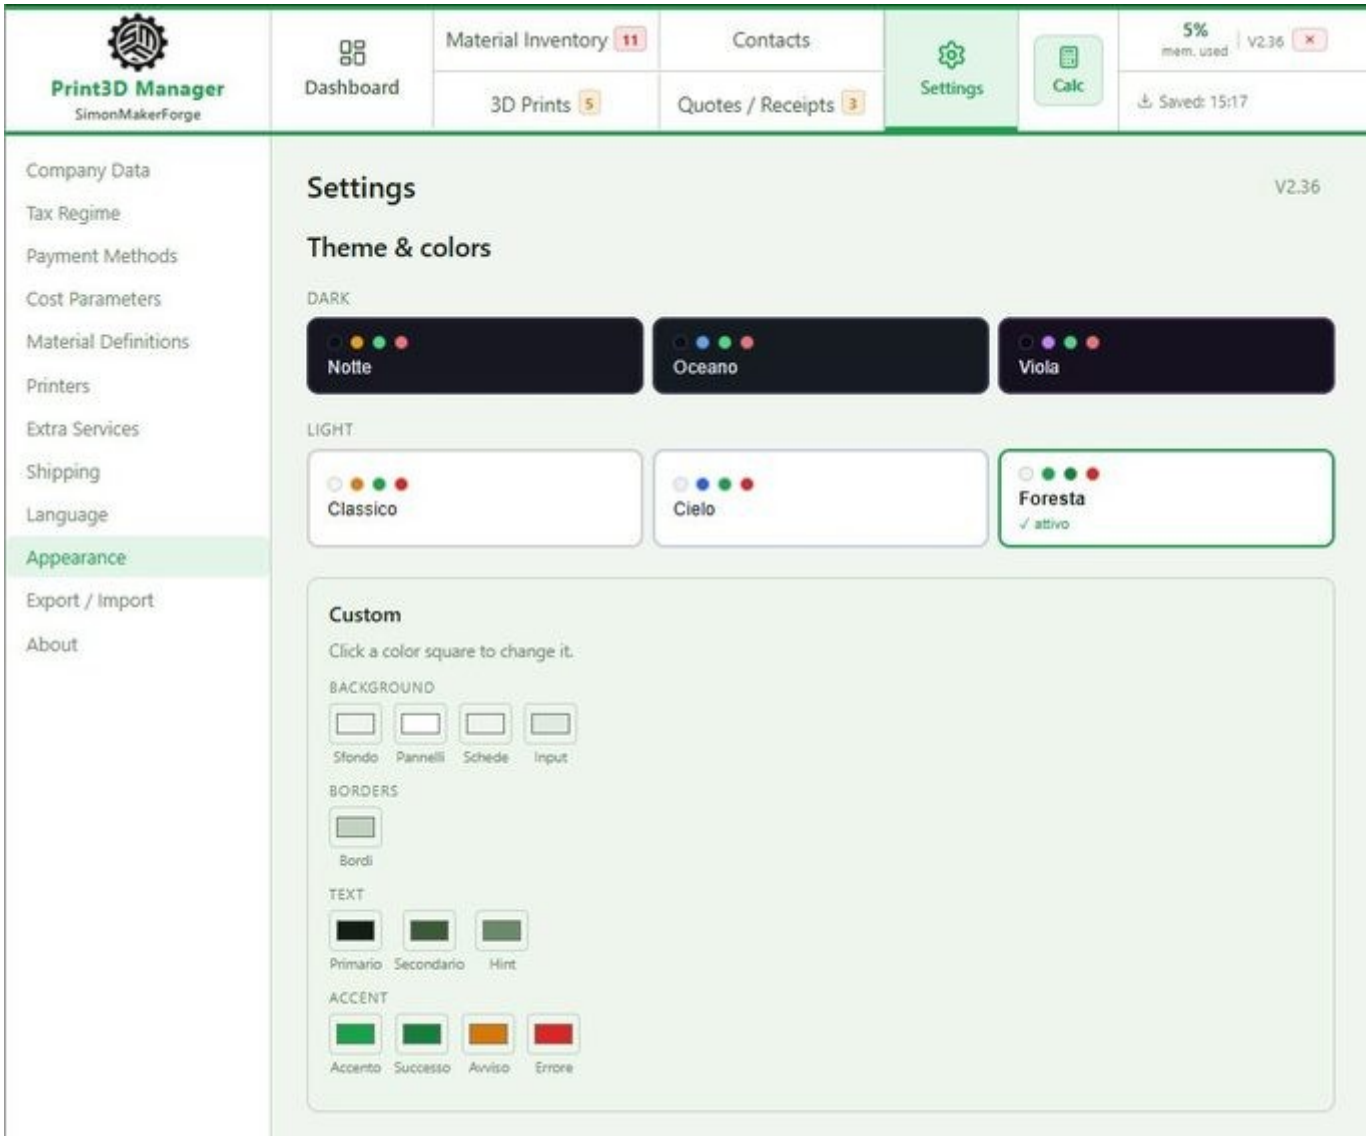

Figure 12 — Appearance settings: theme presets and custom colour editor

Six built-in presets split into Dark (Notte, Oceano, Viola) and Light (Classico, Cielo, Foresta). The active preset is highlighted with a border and "✓ active". The Custom section lets you individually change every interface colour: background, panels, cards, inputs, borders, text, accent, success, warning, error.

> 💡 *Custom themes are saved in settings and persist across sessions. Changing theme is immediate and requires no page reload.*

9.3 — About

Information about the author (SimonMakerForge — Simone Soldani), application version, link to the GitHub repository and voluntary donation options.

10. Export / Import and Session

Backup and data restore management, accessible from Settings → Export / Import.

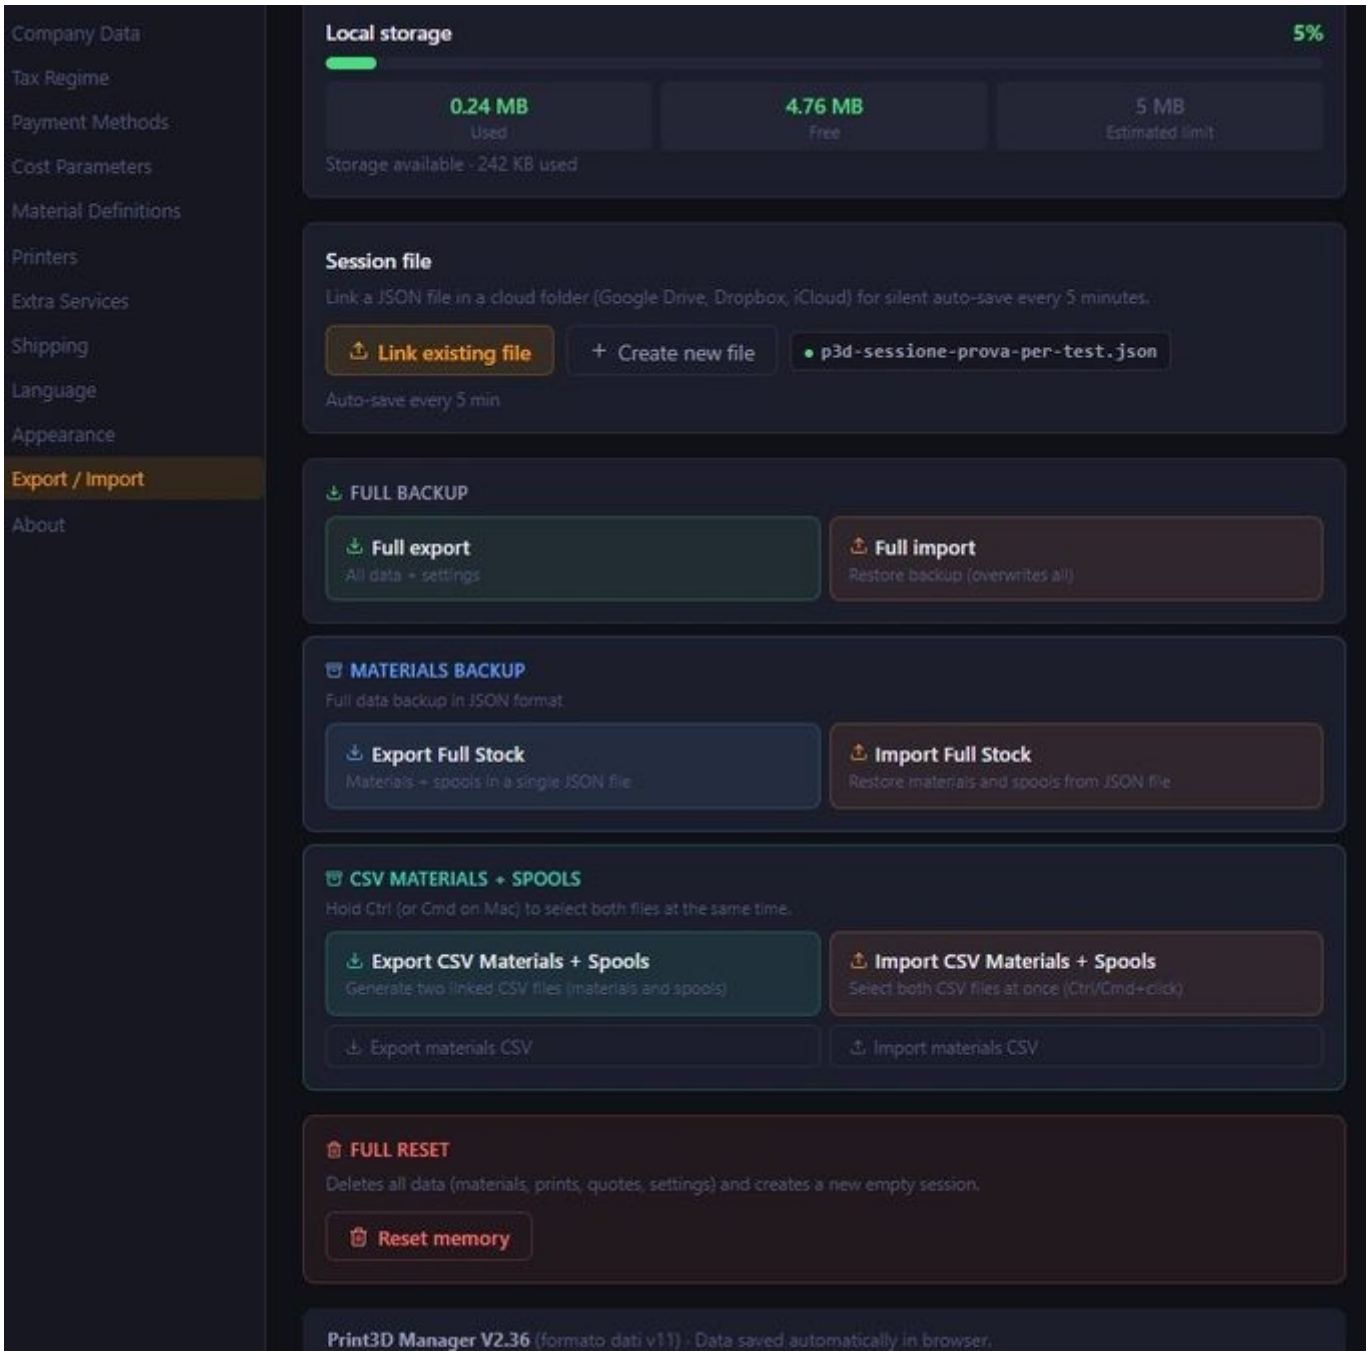

Figure 13 — Export/Import: local storage, session file, JSON backup, CSV and reset

Local storage

The "Local storage" panel shows the browser localStorage in use (used, free, estimated limit ~5 MB). Above 70% a warning appears in the app bar.

Session file

- "Link existing file" — links an existing JSON file in a cloud folder
- "Create new file" — creates a new session file
- Silent auto-save every 5 minutes

Full Backup (JSON)

- Full export — downloads all data and settings
- Full import — restores a backup (overwrites all data)

Materials Backup and CSV

- Export/Import Full Stock — materials and spools in a single JSON file
- Export/Import CSV Materials + Spools — two linked CSV files for Excel/LibreOffice

> 💡 *To import materials + spools via CSV, hold Ctrl (or Cmd on Mac) to select both files at the same time.*

Full Reset

The "Reset memory" button deletes ALL data (materials, prints, quotes, settings) and creates an empty new session. This action is irreversible without a prior backup.

11. Quick Cost Calculator

Accessible at any time via the "Calc" button in the top navigation bar. Lets you quickly estimate the cost and sale price of a print without creating a full quote.

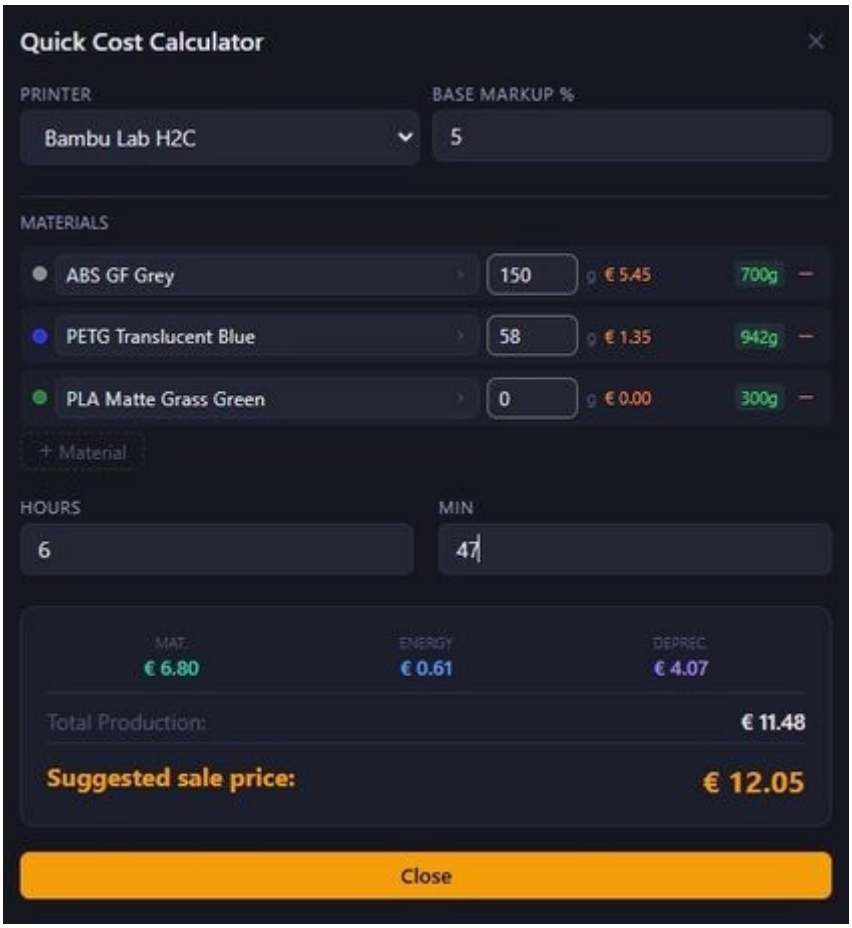

Figure 14 — Quick Cost Calculator with multiple materials, cost breakdown and suggested sale price

Select the printer and one or more materials (+ Material), enter the weight in grams for each, hours, minutes and markup percentage. The calculation updates in real time and shows: material cost, energy cost, depreciation, total production cost and suggested sale price. The remaining stock of each material is shown in green.

12. Typical Workflow

Complete journey from first-time setup to issuing a fiscal receipt.

First-time setup

7. Settings → Company Data: company name, address and logo
8. Settings → Tax Regime: select the correct tax regime
9. Settings → Cost Parameters: energy cost and default labour rate
10. Settings → Printers: add printers with consumption and depreciation
11. Settings → Payment Methods: configure accepted payment methods
12. Settings → Extra Services: add extra services
13. Material Inventory → +Add: register filaments with price, stock and minimum threshold
14. For each material: open "Manage spools" and register physical spools

Day-to-day job management

15. Contacts: create the client if not already present
16. Quotes → +New quote: enter client, project name and models to print
17. For each model: select printer, add materials with weights and estimated duration
18. Review the automatically calculated total (production, markup, VAT, total)
19. Save — linked prints are created automatically in "Pending" status
20. Export the Client PDF and send it to the client
21. On confirmation: set quote status to "Confirmed"
22. 3D Prints: set prints to "In Progress" when work begins
23. On completion: set to "Completed" — stock is updated automatically
24. Set quote status to "Completed"
25. On payment receipt: open the Receipt section of the quote
26. Fill in the service description and period, review the draft PDF
27. Click "Emit Receipt" to issue the definitive fiscal receipt

> 💡 *Linking a JSON session file to a cloud folder (Google Drive, Dropbox) guarantees auto-save every 5 minutes and access from multiple devices.*
